The Budget Game

REAL-LIFE SCENARIOS WITH CONSEQUENCES

An engaging learning experience that develops your students' financial literacy skills.

Bring the Budget Game to life YOUR way!

What's Included

- Student Monthly Progress Reports
- State Standards Aligned Lessons
- Detailed Reporting for Teachers
- 20 Minutes Per Game Month
- 12+ Virtual Game Months
- Pop-Up Life Lessons
- Comparison shopping, time management and other mini games.

OBJECTIVES

The goal of the game is to have students prepare a monthly budget, estimate their expecting savings and stick to that plan. As the game begins, students progress through the month receiving paychecks and paying bills. They manage their virtual checking, savings, and credit card accounts to try to stick to their budget in spite of life's random events that try to throw the students off course. Students

repeat the process for 12 virtual months. Each month takes about 20 minutes to complete. Every few days there are pop-up Life Event cards that challenge the students with unplanned expenses. This puts pressure on their budget, so they realize the importance of planning ahead. Students learn how to make responsible decisions that balance needs vs wants. And they are encouraged to purchase products and services that foster a higher quality of life.

STUDENTS LEARN

Setting and Keeping Savings Goals

Our game focuses on how to build a budget and maintain savings goals. The scenarios are realistic so students are ready to face them in the real world. We emphasize building an emergency savings fund early and to pay yourself first.

They earn the most points by saving at least 10% of their income every month.

Realistic Choices with Long-Term Impact

Students will be faced with hundreds of spending decisions over the course of the game. Every decision has long-term consequences on how the game plays out. This gives each student a unique path in contrast to the rest of their class.

What an excellent way to start class discussions!

Students Manage Credit Cards and Build Their Credit Scores

Most budgeting games are focused on savings only, which is unrealistic. In the PersonalFinanceLab® Budget Game, students learn about balancing needs vs wants, and how to use credit responsibly to build their credit score. They can also learn the hard way what happens when they don't pay their bills on time and incur late fees.

Beyond Saving & Credit-Real Decision Making

Our game focuses not just on credit and savings goals, but also building and maintaining a healthy "Quality of Life". Other budget games reward students for saving as much as possible. We emphasize that most spending decisions don't have a clear "right" or "wrong" answer, but build on each other to paint a complete picture of the student's financial well-being.

OBJECTIVES

Students get real-world experience investing in the stock market and building a virtual portfolio of stocks, bonds, and mutual funds of real companies at real-time prices. They will have access to stock quotes, charts, financial statements, news, analyst ratings and more to help them research stocks. They will quickly learn how local and international news events impacts the markets, their portfolios, and their class rankings.

Students are provided introductory videos to learn the basics of how to research companies and stocks, how to trade stocks, bonds, and mutual funds, and how to build a diversified portfolio.

STUDENTS LEARN

How to Build a Portfolio of Stocks, Bonds and Mutual Funds

Students get experience building and managing a virtual portfolio where they test out different investing strategies. It's just like a real brokerage account with stock quotes, order types, and portfolio charting tools.

The Importance of Portfolio Diversification

Easily prevent students from over-investing in a single stock with our customizable diversification and position limit settings. Students can also research and trade ETFs to get instant diversification across entire sectors with a single trade, making them a great tool for beginners.

S&P 500

Investing Research Tools

PersonalFinanceLab® has a suite of built-in research tools, so students can do their market analysis all in one place! We have smart symbol lookups, trading ideas, and stock screeners with interactive charts, and financial statements for all US publicly traded companies.

Weekly Deposits

Make investing relatable! Ditch unrealistic \$100K starting balances. Use smaller amounts with weekly deposits to mimic retirement contributions and keep students engaged week after week as they actively rebalance their portfolios.

Team Accounts for Group Projects

Students manage individual portfolios and contribute toward a team portfolio that also appears in class rankings. This fosters collaborative competition while each group must work together to make strategic decisions for their combined portfolios.
